

# How the CarGuard works:

---

There has been a sharp increase in motor theft and theft of valuables from vehicles due to **remote jamming**. This recent trend of jamming the remote locking of cars is very common. When a person leaves their car, criminals activate their jammers which prevent the person's remote signal from reaching their car and locking the doors. As the individual walks away, thinking their car is locked, the thieves have easy access to the vehicle to steal laptops, backpacks, wallets, sunglasses and luggage.

The **CarGuard** was designed to detect the jamming signal of thieves and to raise an alarm. It is ideal for large shopping centres and office parking areas as it is fully portable and can be used by security personnel as they patrol the car parks. It has a 100m detection range. The device also has a LCD graphics display and it has both a vibration and beeper alert to warn security personnel of any potential remote jamming.

***Please note that our devices do not prevent the jamming signal – they just detect it and set off an alarm to warn you!***

## Benefits:

- Security personnel are immediately alerted to potential car jamming.
- **CarGuard** is fully portable and has a 100m range.
- The unit has a real time clock and has the ability to record and display a 200 event history.
